# Getting Started with
TC Alpha Generation

Alpha Generation consists of three innovative MetaTrader indicators: market psychology to identify new trade opportunities and potential entry/exit points.

TECHNICAL VIEWS

Our Technical Views indicator is your go-to source for direction and key levels.
Key levels to craft your trade

Leave the analysis to the experts, and use the output of our analysis to craft your trades. Get an instant viewpoint on our preferred direction along with target levels. Discover our alternative scenario based on a pivot level where we would change our view and offer target levels in the opposite direction.
ADAPTIVE CANDLESTICKS

Our favourite patterns

This indicator scans for sixteen of our favourite time-trusted candlestick patterns, instantly on any chart!
Expert filtering for what's important

We combine candlesticks with our unique quantitative and technical analysis expertise to focus only on those patterns that are relevant for decision making.

ADAPTIVE DIVERGENCE CONVERGENCE (ADC)

If you like MACD, you'll love ADC for your short-term trading! It is useful at shorter lengths and offers more timely signals, while also guarding against sideways movements by adapting and lengthening during such periods. undefined.

DOWNLOAD & INSTALL

Download the plugin and go through the easy installation process to get up and running immediately. Please contact us if you need help.

Is this your first time? If not, go to step 2

Download the plugin file and double-click the file to execute it. A simple wizard guides you through the process in your language of choice.
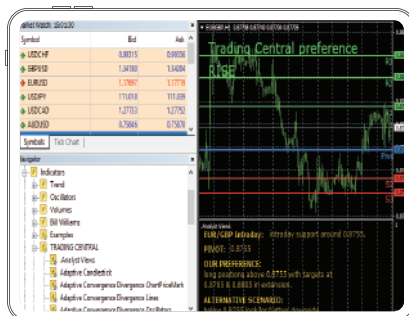

Upgrading from our previous plugin?

Have you already installed previous versions of MetaTrader plugins from Trading Central? You may require Admin rights using the new wizard to uninstall previous versions. Please contact us if you need help.
